

# Amazing Charts Supports Pediatrician's Billing and Charting for 15 Years

Dr. Wheeler goes from paper invoices to integrated Practice Management – all with Amazing Charts

## Challenge: Support 15 years of evolving requirements for billing and charting

Sent printed CMS-1500 forms and electronic superbills from Amazing Charts EHR to biller

▶ *"I switched from paper charts to Amazing Charts in 2002. The EHR produces an electronic superbill, which I printed and gave to my biller. But, after a few years, I was unhappy with his service and looking to switch."*

Found next billing service through Amazing Charts partner program

▶ *"My next biller was an Amazing Charts preferred partner. As the amount of my billings grew, however, I decided my staff and I could handle billing in-house at a lower cost than six percent."*

Implemented MEDfx Practice Management as an intermediate step to fully integrated PM

▶ *"I went with MEDfx because Amazing Charts Practice Management was to be based on it, and they advised me that switching later would be easy."*

## Solution: Integrated EHR+PM lets Dr. Wheeler take billing in-house for lower cost

Easy for everyone to learn

▶ *"The Amazing Charts Practice Management (PM) system is easy to use. My staff and I had no problem learning how to submit claims electronically in a short period of time."*

No change in office staff required

▶ *"My office staff is all part-time, so they welcome a couple of extra hours of work per week."*

Plans to use reports and other advanced features to manage practice finances

▶ *"We started using Amazing Charts PM a month ago, so we're still learning about everything the system can do. For example, we will automatically check eligibility verification when my staff starts using the PM appointment schedule."*

## Results:

- ✓ Practice saves tens of thousands of dollars annually compared with paying a six-percent billing fee
- ✓ 15 years of continuous EHR use demonstrates Dr. Wheeler's enduring satisfaction with Amazing Charts
