

Rural Health Clinic Switches EHR from McKesson to Amazing Charts for Ease of Use and Lower Cost

Dr. David Russell of Orcas Island Family Medicine Teaches Himself How to Use Amazing Charts

Challenge: Switching to an easier EHR system

McKesson Practice Partner EHR was difficult to use	▶	<i>"I used Practice Partner for a few years. It was a difficult program that required significant and extensive in-house training which was both expensive and not very helpful."</i>
Wanted to reduce clicks and complete charts faster	▶	<i>"I was sick and tired of spending time on needless clicks and overly complicated workflows. I was ready for something simple, yet effective."</i>
Needed a lower cost EHR solution	▶	<i>"We are a rural health clinic serving a remote island community, and many of our patients are on Medicare, so keeping costs low is a priority. We wanted an EHR that wasn't going to be a financial burden."</i>

Solution: Amazing Charts EHR

No training needed to get started	▶	<i>"I started using Amazing Charts immediately, without any training. If you can operate in a Windows environment, you can easily pick up Amazing Charts."</i>
Designed the way Dr. Russell practices	▶	<i>"Amazing Charts is intuitive and designed around how I see patients. I am happy with having the Patient Medical History easily accessible when documenting a note."</i>
Generates clinical data required for RHC reporting	▶	<i>"Amazing Charts generates the clinical data required for Rural Health Center reporting, which qualifies us for Federal funds."</i>

Results

- ✓ Low-cost Amazing Charts starts at just \$1200 for a solo provider, easing cash flow concerns
- ✓ Integration with Updox has nearly eliminated the use of paper in the office
- ✓ Dr. Russell recommends Amazing Charts EHR to other Rural Health Centers
