

Dr. Legan Displays EHR on Flat Screen TV To Improve Interaction with Patients

Viewing Amazing Charts EHR on big screen increases patient engagement

Challenge: Removing the barrier of technology

Sharing a small screen	▶	<i>"With a 14-inch laptop, it was extremely difficult to visually project the graphs, medication list, and HL7 imported lab data available with Amazing Charts."</i>
Unengaged patients	▶	<i>"I used to verbally go through the chart and print BPs, weights, and BMIs over time, but the presentation was disjointed, and left the patient with a lot of unhelpful data."</i>
Needing a creative solution	▶	<i>"I wanted a creative way to display my desktop so the patient could enjoy the attributes of Amazing Charts, I just did not know how until my 13-year old son enlightened me."</i>

Solution: Amazing Charts EHR

Free trial of full version	▶	<i>"After doing a lot of research, I started the trial, and within days I knew Amazing Charts was right for my practice."</i>
Better interaction with patients	▶	<i>"With the Chromebook hooked up to the TV screen, I can interact face-to-face with the patient and we can review the chart on the screen together."</i>
Patients more engaged	▶	<i>"Most of my patients really enjoy seeing their BMI graphs, medical history, radiology images, and other medical information. It gets them more engaged with their own health."</i>

Results

- ✓ The affordability of Amazing Charts allowed Dr. Legan to purchase a Chromebook and several flat screen TVs
- ✓ Dr. Legan enjoys more face-to-face interaction with his patients, leading to greater professional satisfaction
- ✓ Dr. Legan's patients are taking more interest in their own healthcare and treatment plans
