

Community Clinic Discovers EHR with Five-Minute Learning Curve

Even students can start documenting clinical notes using Amazing Charts with just five minutes of training

Challenge: Most EHRs are hard to use and require long hours of training

Martin Holt, PA-C, needed an EHR for multiple clinicians and staffers to share at a North Orange County clinic

▶ *"I was asked to find an EHR that was easy to use, affordable for 17 clinical and non-clinical staff, and powerful enough to let us collect reporting information to qualify for MU dollars and PCMH status."*

Wanted an EHR that would be easy for the entire staff to learn

▶ *"I wanted an EMR that was straightforward right off the bat. I didn't have time to sit through hours of training classes, so it had to work quickly out of the box."*

Solution: Amazing Charts is designed for usability with a unique interface

Billing partner recommended Amazing Charts and two other EHRs to compare

▶ *"Our billing partner heard good things from other practices about three EHRs. I played around with each program in the office, and finally concluded that Amazing Charts had the most intuitive interface."*

Amazing Charts has a five-minute learning curve for PA students

▶ *"PA students do one-month rotations in our clinic. Many of them have never seen an EHR before. I can teach them how to write a note, assessment, and plan in less than five minutes. It's that easy to get started in Amazing Charts!"*

Clinicians love the interface modeled on a paper chart

▶ *"Amazing Charts was definitely the right choice for our practice. It has an easy learning curve and the entire chart can be displayed in a single window."*

Results

- ✓ Clinic achieved California Health Plus certification as Level 2 Patient Centered Medical Home
- ✓ Affordable EHR software reduces operating costs, enabling non-profit clinic to see patients regardless of ability to pay
