

# Amazing Charts EHR Allows Medical Clinic to Care for the Homeless

DNP, MD, RN, and team qualify for a major interprofessional HRSA grant thanks to data tracking in Amazing Charts

## Challenge: Finding an EHR to serve the medically underserved

Needed data on population health	▶	<i>"To qualify for the HRSA Grant, we need to track and report on services we provide, so an EHR was essential."</i>
No budget for IT	▶	<i>"At our 200-square foot clinic we're treating people who can't afford to pay for services. Most EHR's would have eaten up nearly half of our operational and research budget."</i>
Most EHRs didn't fit	▶	<i>"We looked into Allscripts, NextGen, and Practice Fusion, but none were a good fit for what we needed."</i>

## Solution: Amazing Charts EHR

Strong references and collaborative	▶	<i>"We asked other physicians about Amazing Charts and continued to hear good things – the company even donated their hosting service to us!"</i>
Health maintenance guidelines	▶	<i>"We found this feature most useful and very unique compared to other EHR vendors. We can track and capture many different data points in real time."</i>
Responsive Vendor	▶	<i>"We have yet to feel as if we're not important. As an individual practice we have a voice! We even have direct contact with the president of the company."</i>

## Results

- ✓ Amazing Charts allows Vanderbilt University clinic to provide high-quality care to people who live 130% below the poverty line
- ✓ Supports an interprofessional system of care that includes Medical and Nursing practitioners, social work, and Clinical Pharmacists (PharmD)
- ✓ Captures data on population health trends to fulfill HRSA grant requirements and more
