

# Clinician Rejects Multiple EHRs Before Discovering Amazing Charts

Nurse Practitioner Deanna Tolman's experiences with EHRs were a nightmare until she used Amazing Charts

## Challenge: Finding the Right EHR for Her Practice

Eclipsys MediNotes EHR was slow, awkward, and crashed all the time	▶ <i>"It was inherently slow because so many different screens were required to document a note. Plus, the system seemed to crash for several hours every few days."</i>
eClinicalWorks EHR had too many clicks	▶ <i>"...way too many clicks to document a note, and too much time wasted waiting for screens to load."</i>
Bond EHR reduced continuity of care	▶ <i>"As a result, many of my fellow practitioners can't finish a note while seeing the patient. If the note isn't finished, copies of the documentation can't be given to the patient to take with them to their primary care clinician, and this acts to reduce continuity of care."</i>

## Solution: Amazing Charts EHR

Easy to learn	▶ <i>"I started using the program that very day and was able to finish a note by the end of each patient visit."</i>
Affordable	▶ <i>"Amazing Charts was so affordable, I was able to purchase my own license and start my house-call practice."</i>
Convenient	▶ <i>"The program made it easy to document a meaningful note during a patient visit, printing out all necessary patient documents, including prescriptions, by the end of the visit."</i>
Usable	▶ <i>"My notes are extensive and detailed, and I love the ability to add free-form text in Amazing Charts."</i>

## Results

- ✓ Amazing Charts' affordability made it possible to open a "micro-practice" in her hometown Aurora, CO
- ✓ Customizable templates allow her to spend more time with each patient
- ✓ Meeting the primary care needs of Americans under the Affordable Care Act
