COVID-19 Solutions for Today

The current COVID-19 Pandemic has put a significant strain on physician practices directly affecting patient engagement and practice revenue. If your Medicare Population exceeds 250 patients, or has a patient segment covered by a plan supporting the CCM codes, CCM payments can be made for services furnished to patients with two or more chronic conditions who are at significant risk of death, acute exacerbation/decompensation, or functional decline.

here to help

- **Are you looking for ways to increase revenue?**

Do so using existing billing codes for Chronic Care Management, Behavioral Health Integration and Remote Patient Monitoring.

- **Are you reviewing methods to deliver remote clinical staff augmentation?**

You can with a suite of preventative programs to add remote staff, or contract existing staff to reduce labor cost while maintaining patient continuity. No investment, No risk, and Immediate engagement.

- **Do you have patients who are unable to visit your office for care, or who would benefit from consistent outreach?**

Avoiding or delaying office visits may compromise the management of your patient's chronic conditions, creating the need for additional support and alternative methods of care. Preventative services help maintain patient engagement between office or tele-health visits by the provider.

The preventative care service suite incorporates a clinical staff, consisting of MA, LPN, RN, NP, and APRN team members, who will meet and collaborate with the practice in delivering care, at the direction of the practice. You have absolute control over the care your patients receive, as well as the billing associated to these services. By proactively addressing care through standard patient outreach, care plan management, tele-health visits and aggregation of relevant patient health data, a bridge between the practice and the patient's home environment is built during the gaps of care. Remote access into Amazing Charts allows the care team to keep relevant patient data flowing and updated in the patient chart.

preventative services tool suite

- 1) **Chronic Care Management (CCM)**
