

## Video Chat

### Convenient care made possible

Updox Video Chat lets providers interact with patients in a new way, by engaging them where they are—on their phones. More effective than a phone call, Video Chat is ideal for reaching patients quickly and conveniently, increasing their access to care while improving outcomes and lowering costs. With no additional apps to download, the visit takes place in a secure, HIPAA-compliant environment. What previously might have taken several back-and-forth phone calls and a possible office visit, can be handled with ease—all done within the Updox Collaboration Platform.

### Improve access to care

Video Chat allows you to extend the reach of your practice or pharmacy to underserved patients.

### Boost revenue

See more patients more often with payers reimbursing for telehealth services at an accelerated pace.

### Increase patient satisfaction

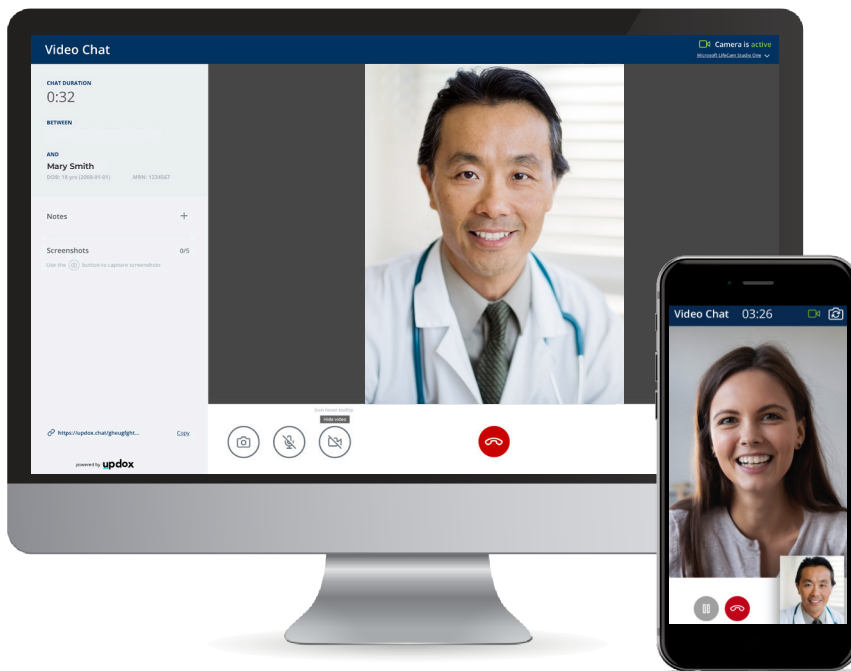

Convenience and a higher level of engagement will strengthen the relationship you have with your patients.

### Easy to use

Video Chat is more effective than a phone call and just as easy to use for you and your patient.

### Enable provider collaboration

Video Chat provides the ability to consult with the best providers wherever they are.

### What's unique about us?

Our easy-to-use platform helps you manage all the relationships you need to take care of your patients. We use technology, such as text, video chat, electronic fax and email, to connect and build relationships that help your business thrive. With our all-in-one application, learn how the Updox Collaboration Platform helps other healthcare providers just like you engage their patients more effectively, increase efficiency and collaborate with other providers.
